Features

- Compatible with Arduino and PMOD form factors
- Low Power ARM Cortex M3
- Open Source IDE Tools
- No External Debugger/Emulator Tools needed

Applicable Parts

- [ADUCM360](#)
- [ADP7105](#)
- [ADP124](#)

Package Contents

- EVAL-ADICUP360 Board
- Micro USB cable

Product Details

The EVAL-ADICUP360 is an Arduino and PMOD compatible form factor development board. The board uses an open source Eclipse based Interactive Development Environment (IDE) which can be downloaded free of charge. The platform contains many hardware and software example projects, to make it easier for customers to prototype/create systems and solutions using the complete ecosystem provided.

The EVAL-ADICUP360 uses the ADuCM360 Arm Cortex-M3 processor as the main device on board. It has integrated dual 24-bit sigma delta converters on chip, which make it extremely flexible for both analog and digital application.

Ahead of What's Possible

ADI enables our customers to interpret the world around us by intelligently bridging the physical and digital with unmatched technologies that sense, measure and connect. We collaborate with our customers to accelerate the pace of innovation and create breakthrough solutions that are ahead of what's possible.
