Update

Plants and Offices

Established in December of 1993, TelCom Semiconductor, Inc. is a worldwide manufacturer of semiconductor devices, with a dedicated wafer manufacturing facility in Mountain View, California and a testing plant in Hong Kong.

Sales and Distribution

TelCom's products and services are represented and distributed through our sales offices in the United States, Hong Kong, and Europe, and by electronics distributors and manufacturer representatives throughout the world.

Products

TelCom Semiconductor, Inc. is a high performance analog company that develops, manufactures, and markets integrated circuits for a broad spectrum of customers with commercial, high-volume standard product applications. TelCom's product direction is focused on proprietary and commodity mixed-signal, power management, thermal management, system management, and interface devices.

TelCom's mixed-signal products consist of multiple precision analog signal processing products including: display and system A/D converters, V/F and F/V converters, voltage references, and precision op amps. Characteristics of this family are low power, cost effectiveness, precision, and high noise rejection/reduction.

TelCom's line of power management integrated circuit devices include low power linear regulators, voltage detectors and monitors, DC-DC converters, and power MOSFET drivers. These discrete replacement devices interface to a wide range of logic levels to directly drive motors, power MOSFETs, IGBTs, bipolar transistors, and inductive-loads.

TelCom's solid-state temperature sensors protect sensitive components such as microprocessors, power supplies, motor drives, and laser diodes from thermal runaway, and control temperature in process control applications.

TelCom's products have gained wide application acceptance. Examples include:

- Laptops, computers, workstations, and peripherals
- Battery charging and temperature control
- Thermal management
- Hand-held and bench top measurement tools
- Motor disk drives
- Telecommunications switches
- Cellular phones
- Consumer electronics

Product Assurance

TelCom is committed to delivering products which meet or exceed our customer's quality and reliability expectations. TelCom Semiconductors' product assurance programs ensure compliance to customer driven quality requirements and provide for continuous improvement.

Life Support Policy

TelCom's products are not authorized for use as critical components in life-support devices or systems without express written approval from the president of TelCom Semiconductor, Inc.

TelCom reserves the right to make changes in the circuitry and specifications of its devices and advises its customers to obtain the latest version of relevant information.

HOT NEW PRODUCTS

Precision Temperature-to-Voltage Converters	10
Precision Temperature-to-Voltage Converters with Shutdown Mode	11
3V Temperature Controller with Programmable Hysteresis	12
Serial Thermometer and Thermal Watchdog	13
Low Cost, 5-Volt Programmable Single Trip-Point Temperature Sensor	14
Low Cost, 3-Volt Single Trip-Point Temperature Sensor	15
PWM Fan Speed Controller with Fault Detection	16
Integrated Fan/Motor Driver	17
Fan Speed Controller with Auto-Shutdown	18
Fan Speed Controller with Auto-Shutdown	19
Consumer Grade Temperature-to-Voltage Converters	20

Precision Analog Front Ends	22
Serial Interface Adapter for TC500 A/D Converter Family	23
Precision Data Acquisition Subsystems	24

Dual Charge Pump Voltage Converter	26
Inverting Doubler Charge Pump	27
Micro Charge Pump Voltage Converters	28
GaAs FET Bias Supplies	29
100mA Charge Pump Voltage Converter with Shutdown	30
High Frequency DC-to-DC Converters	31

50mA, 100mA, and 150mA CMOS LDOs	32
50mA, 100mA, and 150mA CMOS LDOs with Shutdown and $\bar{E}RROR$ Output	33
50mA, 100mA, and 150mA Adjustable CMOS LDOs	34
50mA and 100mA LDOs with Shutdown, $\bar{E}RROR$ Output, and V_{REF} Bypass	35
300mA CMOS LDO with Shutdown	36
300mA CMOS LDO	37

TC02/03 Precision Temperature-to-Voltage Converters

The TC02/03 temperature sensors furnish a linearized output voltage directly proportional to measured temperature. The TC03 has a temperature measurement range of -20°C to $+100^{\circ}\text{C}$. Its output voltage is directly calibrated in degrees Centigrade (i.e., $V_{\text{OUT}} = 10\text{mV}/^{\circ}\text{C} \times \text{Temperature } ^{\circ}\text{C}$). An external pull-down resistor to a negative voltage source is required for temperature measurement below 0°C .

The TC02 has a temperature measurement range of -20°C to $+125^{\circ}\text{C}$, and operates with a single supply. It has the same output voltage slope with temperature as the TC03 ($10\text{mV}/^{\circ}\text{C}$). The output voltage range is 100mV at -20°C to 1.75V at $+125^{\circ}\text{C}$.

FEATURES

- Linearized Temperature-to-Voltage Converters
- Direct Centigrade Output Voltage Scaling (TC03)
- Wide Temperature Measurement Range (TC02) -20°C to $+125^{\circ}\text{C}$
- Excellent Temperature Converter Linearity Over Temperature 0.8°C
- High Temperature Converter Accuracy at 25°C Guaranteed $\pm 2^{\circ}\text{C}$
- Small Packages TO-92-3 and SOT-23B-3

Small size, low cost, and low power operation make the TC02/03 suitable for a wide range of general purpose temperature measurement applications.

TC1023/1024

Precision Temperature-to-Voltage Converters with Shutdown Mode

The TC1023/1024 temperature sensors furnish a linearized output voltage directly proportional to measured temperature. The TC1023 has a temperature measurement range of – 20°C to +100°C. Its output voltage is directly calibrated in degrees Centigrade (i.e., $V_{OUT} = 10mV/^{\circ}C \times \text{Temperature } ^{\circ}C$). An external pull-down resistor to a negative voltage source is required for temperature measurement below 0°C.

The TC1024 has a temperature measurement range of – 20°C to +125°C, and operates with a single supply. It has the same output voltage slope with temperature as the TC1023 (10mV/^{\circ}C). The output voltage range is 100mV at – 20°C to 1.75V at +125°C. Both devices have a chip

FEATURES

- Linearized Temperature-to-Voltage Converters
- Direct Centigrade Output Voltage Scaling (TC1023)
- Shutdown/Calibrate Mode
- Multi-Zone Temperature Sensing Capability
- Wide Temperature Measurement Range (TC1024) – 20°C to +125°C
- Excellent Temperature Converter Linearity 0.8°C Over Temperature
- High Temperature Converter Accuracy ±2°C at 25°C Guaranteed
- Small Packages 8-Pin SOIC and 8-Pin MSOP

enable input that reduces supply current to 1μA (typical) when pulled high. In this state, the output defaults to a high resistance, allowing an external voltage output device (such as a second TC1023/24 for multizone sensing) to be multiplexed on a common analog line.

Small size, low cost, flexibility, and low power operation make the TC1023/1024 suitable for a wide range of general purpose temperature measurement applications.

TC07 3V Temperature Controller with Programmable Hysteresis

Programmable Temperature and Hysteresis Setting

The TC07 is a programmable temperature sensor that operates from power supply levels as low as 2.7V. It consists of an on-board temperature sensor and user-programmable threshold detector. It operates over a maximum temperature range of – 40°C to +125°C (commercial and industrial operating temperature versions are also available). It can be operated in an “open-loop” mode as an over-temperature or under-temperature monitor. It also can be operated as a “closed-loop” controller when its outputs are connected to a fan or heating system. Both high-true and low-true outputs are provided for easy system interface. Typical cooling applications include thermal overload sensing and fan control in power supplies and computing systems. Typical heating applications include en-

FEATURES

- User Programmable Hysteresis and Temperature Set Point
- Easily Programs with Two External Resistors
- Wide Temperature Detection Range
 - TC07CxA 0°C to +70°C
 - TC07ExA – 40°C to +85°C
 - TC07VxA – 40°C to +125°C
- Small Packages 8-Pin MSOP and 8-Pin SOIC
- Cost Effective

vironmental heating controls, LCD display heaters, and process control.

The user programs the temperature and hysteresis trip points with a single resistor each. The outputs are driven active when ambient temperature exceeds the user’s programmed temperature trip point setting. These outputs remain active until ambient temperature falls below the user’s programmed hysteresis trip point setting. The ability to program both the setpoint temperature and hysteresis allows the user to “tailor” the on/off control characteristics of the TC07 to match the system requirements.

TCN75 Serial Thermometer and Thermal Watchdog

The TCN75 is a serially programmable temperature sensor that notifies the host controller when ambient temperature exceeds a user-programmed setpoint. Hysteresis also is programmable. The INT/COMP output is programmable as either a simple comparator for thermostat operation or as a temperature event interrupt. Communication with the TCN75 is accomplished via a 2-wire bus that is compatible with industry standard protocols. This permits reading the current temperature, programming the setpoint and hysteresis, and configuring the device.

The TCN75 powers up in Comparator Mode with a default setpoint of 80°C with 5°C hysteresis. Defaults allow independent operation as a stand-alone thermostat. A shutdown command may be sent via the 2-wire bus to

FEATURES

- Solid-State Temperature Sensing; 2°C Accuracy from -25°C to 100°C; 2.7V - 5.5V Operating Range
- Programmable Trip Point and Hysteresis with Power-up Defaults
- Industry Standard 2-Wire Serial Interface
- Thermal Event Alarm Output Functions as Interrupt or Comparator / Thermostat Output
- Up to 8 TCN75's May Share the Same Bus
- Shutdown Mode for Low Standby Power Consumption
- Low Power 250µA (Typ.) Operating 1µA (Typ.) Shutdown Mode
- 8-Pin Plastic DIP, SOIC, and MSOP Packaging

activate the low-power standby mode. Address selection inputs allow up to eight TCN75's to share the same 2-wire bus for multi-zone monitoring.

All registers can be read by the host and the INT/COMP output's polarity is user programmable. Both polled and interrupt driven systems are easily accommodated. Small physical size, low installed cost, and ease of use make the TCN75 an ideal choice for implementing sophisticated system management schemes.

TC622 Low Cost, 5-Volt Programmable Single Trip-Point Temperature Sensor

The TC622 integrates a temperature sensor, voltage reference, and all required circuitry to form a stand-alone, single trip-point temperature sensor.

Key features of the TC622 include a user-programmable temperature set point, 4.5V to 18.0V power supply range, a temperature measurement range of -40°C to $+125^{\circ}\text{C}$, and space-saving 8-pin PDIP and SOIC packaging.

The TC622 and its lower operating voltage companion, TC624 ($\text{V}_{\text{DD}} = 2.7\text{V}$ to 4.5V) are ideally suited as cost-effective thermal control integrated circuits. Applications include thermal management for all high

FEATURES

- Temperature Set Point Easily Programs with a Single External Resistor
- TO-220 Package for Direct Mounting to Heatsink (TC622xAT) or Standard 8-Pin PDIP, SOIC
- Cost Effective

performance microcontrollers and microcomputers, power supplies, consumer appliances, automotive and industrial temperature control, and battery overheat detectors in portable equipment. Both devices feature very low supply current, making them suitable for many portable applications.

TC624

Low Cost, 3-Volt Single Trip-Point Temperature Sensor

FEATURES

- Temperature Set Point Easily Programs with a Single External Resistor
- Operates with 2.7V Power Supply
- Standard 8-Pin PDIP, SOIC
- Cost Effective

The 3-volt electronics market is heating up; therefore, cost-effective thermal management techniques must be incorporated into every modern system design. The TC624 integrates a temperature sensor, voltage reference, and all required circuitry to form a stand-alone single trip-point temperature sensor.

Key features of the TC624 include a 2.7V to 4.5V supply voltage range, a user-programmable temperature set point, a temperature measurement range of -40°C to $+125^{\circ}\text{C}$, and space-saving 8-pin PDIP and SOIC packaging.

The TC624's low voltage operation, low installed cost, and ease of programming make it the clear choice for designers of highly cost-sensitive consumer and industrial thermal management applications. Among these applications are computer systems, smoke detectors, heat detectors, home entertainment electronics, power supplies, board mounted power systems, and battery overheat detectors in portable equipment.

TC642 PWM Fan Speed Controller with Fault Detection

The TC642 is a switch mode fan speed controller for use with brushless DC motors. Temperature proportional speed control is accomplished using pulse width modulation. A thermistor (or other voltage output temperature sensor) connected to the V_{IN} input furnishes the required control voltage of 1.25V to 2.65V (typical) for 0% to 100% PWM duty cycle. Minimum fan speed is set by a simple resistor divider on the V_{MIN} input. An integrated Start-Up Timer ensures reliable motor start-up at turn-on, coming out of Shutdown Mode, or following a transient fault.

A logic low applied to V_{MIN}, pin 3, causes fan shutdown. In normal fan operation, a pulse train is present at SENSE, pin 5, indicating normal

FEATURES

- Temperature Proportional Fan Speed for Acoustic Control and Longer Fan Life
- Efficient PWM Fan Drive
- 3.0V to 5.5V Supply Range; Fan Voltage Independent of TC642 Supply Voltage - Supports Any Fan Voltage!
- Fault Detection Circuits Protect Against Fan Failure and Aid System Testing
- Shutdown Mode for "Green" Systems
- Supports Low Cost NTC/PTC Thermistors
- Space-Saving 8-Pin PDIP and SOIC Packages

operation. A missing-pulse detector monitors this pin during normal fan operation. A stalled, open, or unconnected fan causes the TC642 to trigger its start-up timer once. If the fault persists, the FAULT output goes low, and the device is latched in its Shutdown Mode. FAULT is also asserted if the PWM reaches 100% duty cycle, indicating a possible thermal runaway situation, although the fan continues to run. See the *Applications* section for more information and system design guidelines.

The TC642 is available in a standard 8-pin plastic DIP and SOIC packages. Commercial and industrial temperature ranges are available in both package options. The TC642's low voltage operation, low installed cost, and ease of programming make it the clear choice for designers of highly cost-sensitive consumer and industrial thermal management applications. Among these applications are computer systems, smoke detectors, heat detectors, home entertainment electronics, power supplies, board mounted power systems, and battery overheat detectors in portable equipment.

TC643

Integrated Fan / Motor Driver

The TC643 is a switchmode brushless DC fan/motor speed driver with diagnostic circuits. External components are kept to a minimum by integrating the power transistor on chip. Any logic-level signal can be used to drive the on-chip Power Driver. The output is current limited and a logic-level indication, ILMT, is provided to indicate an over-current condition.

The RPM output gives an indication of motor RPM. Each time the motor current is interrupted by commutation, a logic pulse occurs on RPM. The fundamental frequency of the resulting square wave is (4 x rpm). See the *Applications* section for more information and system design guidelines.

FEATURES

- Integrates Current Limited Power Driver and Diagnostic/Monitoring Circuits in a Single IC
- Works with Standard DC Brushless Fans/Motors
- Supports Efficient PWM Drive with Logic-Level Input
- Supply Range 2.7V to 5.5V
- Motor Voltage Independent of TC643 Supply Voltage; Supports 3V-15V Fans!
- Logic-Level Output Provides RPM Data
- Optimized For Use as a Microcontroller Peripheral
- Eliminates Discrete Components and Analog Circuit Design Effort
- Internal Thermal Shutdown For Fail-safe Operation
- Available in 8-Pin PDIP, SOIC, and MSOP Packaging

The TC643 mates easily with microcontrollers or other digital logic to form a complete motor or fan control and monitoring system, featuring: Variable Speed PWM Drive; RPM Indication; and Motor Open / Motor Shorted/ Motor Locked Fault Detection.

The TC643 is available in a standard 8-pin plastic DIP, SOIC, and MSOP package.

TC646 Fan Speed Controller with Auto-Shutdown

The TC646 is a switch mode fan speed controller for use with brushless DC motors. Temperature proportional speed control is accomplished using pulse width modulation (PWM). A thermistor (or other voltage output temperature sensor) connected to the V_{IN} input furnishes the required control voltage of 1.25V to 2.65V (typical) for 0% to 100% PWM duty cycle. The TC646 automatically suspends fan operation when measured temperature (V_{IN}) is below a user-programmed minimum setting (V_{AS}). An integrated Start-Up Timer ensures reliable motor start-up at turn-on, coming out of Shutdown mode, or following a transient fault.

In normal fan operation, a pulse train is present at SENSE, pin 5. A

FEATURES

- Temperature Proportional Fan Speed for Acoustic Control and Longer Fan Life
- Efficient PWM Fan Drive
- 3.0V to 5.5V Supply Range; Fan Voltage Independent of TC646 Supply Voltage - Supports Any Fan Voltage!
- Fault Detection Circuits Protect Against Fan Failure and Aid System Testing
- Automatic Shutdown Mode for "Green" Systems
- Supports Low Cost NTC/PTC Thermistors
- Space-Saving 8-Pin PDIP and SOIC Packages

missing-pulse detector monitors this pin during fan operation. A stalled, open, or unconnected fan causes the TC646 to trigger its startup timer once. If the fault persists, the FAULT output goes low, and the device is latched in its Shutdown Mode. FAULT is also asserted if the PWM reaches 100% duty cycle, indicating a possible thermal runaway situation, although the fan continues to run. See the *Applications* section for more information and system design guidelines.

The TC646 is packaged in a space-saving 8-pin plastic DIP or SOIC package and is available in both industrial and commercial temperature ranges.

TC648

Fan Speed Controller with Auto-Shutdown

FEATURES

- Temperature Proportional Fan Speed for Acoustic Control and Longer Fan Life
- Efficient PWM Fan Drive
- 3.0V to 5.5V Supply Range; Fan Voltage Independent of TC648 Supply Voltage - Supports Any Fan Voltage!
- Automatic Shutdown Mode for "Green" Systems
- Supports Low Cost NTC/PTC Thermistors
- Space-Saving 8-Pin PDIP and SOIC Packages
- Low Cost

The TC648 is a switch mode fan speed controller for use with brushless DC motors. Temperature proportional speed control is accomplished using pulse width modulation (PWM). A thermistor (or other voltage output temperature sensor) connected to the V_{IN} input furnishes the required control voltage of 1.25V to 2.65V (typical) for 0% to 100% PWM duty cycle. The TC648 automatically suspends fan operation when measured temperature (V_{IN}) is below a user-programmed minimum setting

(V_{AS}). An integrated Start-Up Timer ensures reliable motor start-up at turn-on, coming out of Shutdown mode, or following a transient fault. Over-Temperature Fault (OTF) is asserted if the PWM reaches 100% duty cycle, indicating a possible thermal runaway situation.

The TC648 is packaged in a space-saving 8-pin plastic DIP or SOIC package and is available in extended temperature ranges.

TC1132/1133 Consumer Grade Temperature-to-Voltage Converters

FEATURES

- Linearized Thermistor Replacement
- Direct Centigrade Output Voltage Scaling (TC1133)
- Wide Measurement Range – 20°C to +125°C (TC1132)
- Excellent Converter Linearity..... 0.8°C
- Guaranteed Accuracy at 25°C ±3°C
- Small Packages SOT-23B-3, TO-92-3

The TC1132/1133 temperature-to-voltage converters furnish a linearized output voltage directly proportional to temperature. The TC1133 has a temperature measurement range of – 20°C to +100°C. Its output voltage is directly calibrated in degrees centigrade (i.e., $V_{OUT} = 10, V/^\circ C \times \text{temperature } ^\circ C$). An external pull-down resistor to a negative voltage source is required for temperature measurement below 0°C.

The TC1132 has a temperature measurement range of – 20°C to

+125°C, and operates from a single supply. It has the same output slope with temperature as the TC1133 (10mV/°C). The output voltage range is 100mV at – 20°C to 1.75V at +125°C.

Small size, low cost, low power operation, and linear voltage output with temperature make the TC1132/1133 suitable replacements for thermistors in a wide variety of applications.

TC510/514 Precision Analog Front Ends

The TC510 and TC514 implement dual slope A/D converters (with resolutions as high as 17 bits plus sign) when supervised by the system processor. The TC510 is a single-channel converter. The TC514 adds a 4-input, differential analog multiplexer to the basic TC510 design.

Powered by a single 5V supply, the TC510/514 accept differential (and bipolar) input signals and exhibits a high degree of 50/60Hz noise rejection. They consume under 20mW of power. The output of the on-

FEATURES

- Precision (up to 17 Bits) A/D Converter "Front End"
- 3-Pin Control Interface to Microprocessor
- Flexible: User Can Trade-Off Conversion Speed for Resolution
- Single-supply Operation (TC510/514)
- 4 Input, Differential Analog MUX (TC514)
- Automatic Input Voltage Polarity Detection
- Low Power Dissipation 18mW
- Wide Analog Input Range (TC510) ±4.2V
- Directly Accepts Bipolar and Differential Input Signals

board charge pump (which generates negative Bias for the TC510/514) is also available as a negative supply for other components in the system. This allows the use of less expensive, dual-supply op amps and comparators without the added cost of a dedicated charge pump converter.

The low interconnect overhead (3-wire logic port) consumes a minimum amount of I/O resources, making the TC510/514 ideal for microcontroller-based systems of all kinds. This interface also enables the user to trade-off resolution for increased conversion speed under software control.

Their low operating power, excellent noise rejection, high resolution, flexibility, and low cost make the TC510/514 the ideal choice for many portable, cost-sensitive system applications, such as consumer medical electronics, mid-to-low end instrumentation and controls, battery charging systems, and test equipment.

TC520A Serial Interface Adapter for TC500 A/D Converter Family

FEATURES

- Converts TC500/500A/510/514 to Serial Operation
- Programmable Conversion Rate and Resolution for Maximum Flexibility
- Supports up to 17 Bits of Accuracy Plus Polarity Bit
- Low Power Operation Typically 7.5mW
- 14-Pin PDIP or 16-Pin SOIC Packages
- Polled or Interrupt Mode Operation

The TC520A Serial Interface Adapter provides logic control for TelCom's TC500/500A/510/514 family of dual slope, integrating A/D converters. It directly manages TC500 converter phase control signals A, B, and CMPTR, thereby reducing host processor task loading and software complexity. Communication with the TC520A is accomplished over

a 3-wire serial port. Key converter operating parameters are programmable for complete user flexibility.

Data conversion is initiated when the \overline{CE} input is brought low. The converted data (plus overrange and polarity bits) are held in an 18-bit shift register until read by the processor or until the next conversion is completed. Data may be clocked out of the TC520A at any time, and at any rate the user prefers. A Data Valid (\overline{DV}) output is driven active at the start of each conversion cycle, indicating the 18-bit shift register update has just been completed. This signal may be polled by the processor or can be used as data-ready interrupt.

The TC520A timebase can be derived from an external frequency source of up to 6MHz or can operate from its own external crystal. It requires a single 5V logic supply and dissipates less than 7.5mW.

TC530/534 Precision Data Acquisition Systems

The TC530/534 are low cost 5V serial data acquisition systems targeted at precision measurement applications. The TC530 and TC534 utilize dual slope integration conversion technology and deliver 17-bit accuracy with greater than 60db of 50/60Hz noise rejection. The user can readily adapt the TC530/534 to the measurement task at hand by trading off decreased resolution for faster conversion time.

Powered by a single 5V supply, the TC530/534 accept both differential and bipolar input signals (maximum of +4.5V), eliminating the need for additional input signal conditioning circuitry. The TC534 has an on-

FEATURES

- Precision (up to 17 Bits) A/D Converter
- 3-Wire Serial Port
- Flexible: User Can Trade-Off Conversion Speed Against Resolution
- Single Supply Operation
- - 5V Output Pin
- 4-Input, Differential Analog MUX (TC534)
- Automatic Input Polarity and OVERRANGE Detection
- Low Operating Current 5mA Max
- Wide Analog Input Range ±4.2V Max
- Cost Effective

board 4-channel analog multiplexer, while the TC530 is the single channel version. Each device has its own on-board charge pump converter with a - 5V, 10mA output to provide negative Bias to other analog circuitry in the system. This allows the use of less expensive, dual supply op amps, comparators, and interface circuitry without the added cost of a dedicated charge pump converter. The TC530/534 also consumes 25mW of power, making it ideal for many battery-operated applications such as blood glucose meters, consumer electronics, and portable testers.

Power Management

TCM680 Dual Charge Pump Voltage Converter

The TelCom TCM680 is a dual-capacitive charge pump converter that develops $\pm 10V$ from a single $+5V$ logic power supply or $\pm 6V$ from a $+3V$ lithium cell. The TCM680 requires only four inexpensive electrolytic capacitors and no inductors.

Housed in an 8-pin SOIC or PDIP, the TCM680 is useful when both positive and negative analog supply voltages are required, but only a single low voltage supply is available. High differential output voltage makes the TCM680 especially useful in LCD Bias applications, allowing the use of less expensive, higher voltage displays. Other applications include

FEATURES

- 99% Voltage Conversion Efficiency
- 85% Power Conversion Efficiency
- Wide Voltage Range $+2.0V$ to $+5.5V$
- Only 4 External Capacitors Required
- Space Saving 8-Pin SOIC Design and 8-Pin PDIP

analog Bias supplies in portable systems such as cellular phones, portable instrumentation, and portable computing equipment.

TC682

Inverting Doubler Charge Pump

FEATURES

- 99.9% Voltage Conversion Efficiency
- 92% Power Conversion Efficiency
- Wide Input Voltage Range +2.4V to +5.5V
- Only 3 External Capacitors Required
- 185µA Supply Current
- Space-Saving 8-Pin SOIC and 8-Pin PDIP Packages

The TC682 differs from older charge pump topologies in that it both inverts and doubles its supply voltage (i.e., $V_{OUT} = -2 V_{IN}$). The TC682 boasts low supply current (typically less than 200µA at a clock frequency of 10kHz) and a maximum output current of - 10mA. Typical voltage conversion efficiency is in excess of 90%, and only three external capacitors are required.

Housed in an 8-pin SOIC, the TC682 is useful for a wide variety of applications where a negative power supply is required, but only a posi-

tive supply is available. Typical applications are - 10V from a +5V logic supply, and - 6V from a 3V battery supply. The TC682 is particularly useful in systems that operate from a +3V power supply and use inexpensive, higher voltage LCD displays. The +3V supply added to the - 6V Bias generated by the TC682 results in a total of 9V available for LCD Bias. Other applications include general purpose negative supplies for op amps and other analog components. Its high efficiency and low supply current make the TC682 a natural for many applications such as medical instruments, panel meters, cellular phones, and portable computing equipment.

TCM828/829 Micro Charge Pump Voltage Converters

Housed in ultra-small SOT-23A-5 packages, the TCM828/829 charge pump converters consume only 25% of the space of a standard 8-pin SOIC charge pump. Both devices invert or double an input voltage of +1.5V to +5.5V and can deliver up to 25mA of output current. Only two low-cost capacitors are required when operating as a voltage inverter.

FEATURES

- Small Size 5-Pin SOT-23A Package
- High Output Current Capability 25mA
- Low Supply Current (TCM828) 60 μ A
- High Voltage Conversion Efficiency 95%

The TCM828 operates at a frequency of 12KHz while the TCM829 operates at a frequency of 35KHz.

Small size, high efficiency, and low operating current make these converters ideal for battery-powered applications.

TCM850/851/852/853 GaAs FET Bias Supplies

The TCM850/851/852/853 combine an inverting charge pump and a linear post-regulator in a single 8-pin SOIC package. The regulated, low noise output makes these devices ideal in GaAs FET bias applications. They work particularly well in GSM phones, where the devices' output may also be used as the reference for a digital-to-analog converter (DAC).

All four devices accept a range of input voltages from 4.5V to 10.0V and have a maximum output current of – 5mA. The TCM850/851/852 default to a preset output voltage (– 4.1V) when the feedback input (FB) is grounded. The user can adjust the output voltage from – 0.5V to

FEATURES

- Fixed – 4.1V or Adjustable – 0.5V to – 9V Output at 5mA
- 4.5V to 10V Input Voltage Range
- Low Output Voltage Ripple:
TCM850-852 2mVp-p
TCM853 1mVp-p
- 100kHz Charge Pump Switching Frequency
- Optional External Synchronizing Clock Input (TCM852)
- Logic Level Shutdown Mode 0.5µA Typ.
- Low Cost, 8-Pin SOIC Package

– 9.0V with a simple external resistor divider connected from the output to the FB input. The output voltage of the TCM853 is programmable with an external positive control voltage.

While these devices are targeted at GaAs FET bias in cellular phones and wireless data loggers, they also are suitable in any application requiring a precision source of negative voltage, such as LCD contrast controls and negative regulated supplies for op amps and other analog circuits.

TC1121 100mA Charge Pump Voltage Converter with Shutdown

The TC1121 charge pump converter is a higher output current upgrade to the MAX860 and similar charge pump devices. It is capable of supporting a 100mA output load. Typical applications include voltage inverters and doublers from an input voltage range of 1.5V to 5.5V. As with all charge pump converters, the TC1121 uses no inductors which saves cost, size and EMI.

The on-board oscillator operates at a typical frequency of 10KHz (at $V^+ = 5V$) when the Frequency Control input (FC) is connected to ground. The oscillator frequency increases to 200KHz when FC is connected to V^+ , allowing the use of smaller capacitors. Operation at sub-10KHz frequencies results in lower quiescent current and is accomplished

FEATURES

- High Output Current 100mA
- High Power Efficiency at 100mA 91%
- Uses Only 2 Capacitors NO Inductors Required!
- Selectable Oscillator Frequency 10KHz to 200KHz
- Power-Saving Shutdown Input
- Small Packages 8-Pin PDIP, SOIC and MSOP

with the addition of an external capacitor from OSC (pin 7) to ground. The TC1121 also can be driven from an external clock connected OSC if so desired.

Typical supply current at 10KHz is 200 μ A, and falls to less than 2 μ A when the shutdown input (\overline{SHDN}) is brought low, regardless of whether the internal or an external clock is used. The TC1121 is available in an industry-standard 8-pin SOIC package or a space-saving 8-pin MSOP package (which occupies half the space of an 8-pin SOIC).

Small size, high output current and shutdown mode capability make the TC1121 ideal for both line-and battery-powered applications.

TC7660H High Frequency DC-to-DC Converter

FEATURES

- Pin Compatible with 7660, High Frequency Performance DC-to-DC Converter
- Low Cost, Two Low Value External Capacitors Required (1.0 μ F)
- Converts +5V Logic Supply to \pm 5V System
- Wide Input Voltage Range 1.5V to 10V
- Voltage Conversion 99.7%
- Power Efficiency 85%
- Available in 8-Pin SOIC and PDIP Packages

The TC7660H is a high frequency DC-to-DC voltage converter, pin compatible to the industry standard 7660. Its higher frequency operation, 120kHz versus the 7660's 10KHz, allows for the use of significantly smaller capacitors. The resulting board space and weight savings benefit battery-operated applications such as cellular phones, pagers, portable instrumentation devices, and display modules.

The TC7660H also features a wide input voltage range of 1.5V to 10V, 85% power efficiency, 99.7% voltage conversion, space-saving 8-pin PDIP and SOIC packaging, and requires only two low cost, low value external capacitors (1.0 μ F).

Power Management

TC1014/1015/1185 50mA, 100mA, and 150mA CMOS LDOs

The TC1014/1015/1185 are CMOS upgrades to bipolar low dropout regulators, such as the LP2980. CMOS construction guarantees no ground current, as in bipolar regulators, resulting in significantly lower supply current over the entire load range. A reference bypass input also is provided for excellent low noise operation.

FEATURES

- Very Low Dropout Voltage
- High Output Current (TC1185) 150mA
- High Precision ±2%
- Standard or Custom Output Voltages
- Better than Bipolar No Ground Currents!
- Shutdown Input
- Reference Bypass Input for Ultra Low-Noise Operation
- Over-Temperature Shutdown
- Small Package SOT-23A-5
- Pin Compatible with MIC5205 and LP2980

Maximum output currents of 50mA (TC1014), 100mA (TC1015), and 150mA (TC1185) are available. Typical dropout voltage is 85mV (TC1014), 180mV (TC1015), and 270mV (TC1185) at full load. An output capacitor of only 1μF is required for stability. The TC1014/1015/1185 enter a low power shutdown state (supply current 0.5μA max) when SHDN is brought low.

TC1054/1055/1186

50mA, 100mA, and 150mA CMOS LDOs with Shutdown and ERROR Output

The TC1054/1055/1186 are CMOS upgrades to bipolar low dropout regulators such as the LP2980. CMOS construction guarantees no ground current as in bipolar regulators, resulting in significantly lower supply current over the entire load range. Maximum output currents of 50mA (TC1054), 100mA (TC1055), and 150mA (TC1186) are available. Typical dropout voltage is 85mV (TC1054), 180mV (TC1055), and 270mV (TC1186) at full load. An output capacitor of only 1μF is required for stability.

FEATURES

- Better than Bipolar No Ground Currents!
- Very Low Dropout Voltage
- High Output Current (TC1186) 150mA
- High Precision ±2%
- Standard or Custom Output Voltages
- Shutdown Input
- ERROR Output can be Used to Detect Low Battery or Used as a Power-on Reset Generator
- Over-Temperature Shutdown
- Small Package SOT-23A-5

The error output (ERROR) is asserted when the TC1054/1055/1186 are out-of-regulation (usually due to low input voltage, or excessive output current). ERROR can be used as a low battery warning or as a processor RESET signal (with the addition of an external RC network). The TC1054/1055/1186 enter a low power shutdown state (supply current $\leq 0.5\mu\text{A}$ max) when SHDN is brought low. During shutdown, both V_{OUT} and ERROR are disabled.

Power Management

TC1070/1071/1187 50mA, 100mA, and 150mA Adjustable CMOS LDOs

FEATURES

- Very Low Dropout Voltage
- High Output Current (TC1187) 150mA
- Adjustable Output Voltage
- Better than Bipolar No Ground Currents!
- Shutdown Input
- Over-Temperature Shutdown
- Small Package SOT-23A-5

The TC1070/1071/1187 are adjustable CMOS upgrades to bipolar low dropout regulators. Output voltage is programmed with a simple external resistor divider from V_{OUT} to ADJ . CMOS construction guarantees no ground current, as in bipolar regulators, resulting in significantly lower supply current over the entire load range.

Maximum output currents of 50mA (TC1070), 100mA (TC1071), and 150mA (TC1187) are available. Typical dropout voltage is 85mV (TC1070), 180mV (TC1071), and 270mV (TC1187) at full load. An output capacitor of only $1\mu F$ is required for stability. The TC1070/1071/1187 enter a low power shutdown state (supply current 0.5 μA max) when $SHDN$ is brought low.

TC1072/1073

50mA and 100mA LDOs with Shutdown, **ERROR** Output, and V_{REF} Bypass

FEATURES

- Better than Bipolar No Ground Currents!
- Very Low Dropout Voltage
- High Output Current (TC1073) 100mA
- High Precision $\pm 2\%$
- Standard or Custom Output Voltages
- Shutdown input
- **ERROR** Output can be Used to Detect Low Battery or as a Power-on Reset Generator
- Reference Bypass Input for Low Noise Operation
- Over-Temperature Shutdown
- Small Package SOT-23A-6

The TC1072/1073 are CMOS upgrades to bipolar low dropout regulators such as the LP2980. CMOS construction guarantees no ground current, as in bipolar regulators, resulting in significantly lower supply current over the entire load range. Maximum output currents of 50mA (TC1072) and 100mA (TC1073) are available. Typical dropout voltage is 85mV (TC1072) and 180mV (TC1073) at full load. An output capacitor of only $1\mu F$ is required for stability. A reference bypass input is provided for excellent low noise operation.

The error output (**ERROR**) is asserted when the TC1072/1073 is out-of-regulation (usually due to low input voltage, or excessive output current). **ERROR** can be used as a low battery warning or as a processor **RESET** signal (with the addition of an external RC network). The TC1072/1073 enter a low power shutdown state (supply current $\leq 0.5\mu A$ max) when **SHDN** is brought low. During shutdown, both V_{OUT} and **ERROR** are disabled.

TC1107 300mA CMOS LDO with Shutdown

FEATURES

- Better than Bipolar No Ground Currents!
- High Output Current 300mA
- Very Low Dropout Voltage 350mV @ 300mA
- High Precision ±2%
- Low Quiescent Current 50µA
- Fixed and Adjustable Output Voltages
- Shutdown Input
- Over-Temperature and Over Current Protection
- Reference Bypass Input
- Small Packages 8-Pin SOIC and MSOP

The TC1107 is a CMOS LDO with very low dropout voltage. CMOS construction guarantees no ground current, as in bipolar regulators, resulting in significantly lower supply current over the entire load range. The TC1107 enters a low power shutdown state (supply current $\leq 0.5\mu\text{A}$ max) when $\overline{\text{SHDN}}$ is brought low. Short circuit and over-temperature protection also is included.

The TC1107 is available in several fixed voltages and has the same pin out as the MIC5201 and LT1121, with lower quiescent current and greater output current capability.

A reference bypass input also is included for very low noise operation. An output capacitor of only 1μF is required for stability.

It is available in an industry-standard 8-pin SOIC package or in a space-saving 8-pin MSOP package (which takes up half the space of an 8-pin SOIC).

TC1108

300mA CMOS LDO

FEATURES

- Very Low Dropout Voltage 300mA
- High Output Current $\pm 2\%$
- High Precision $\pm 2\%$
- Fixed and Adjustable Output Voltages
- Low Quiescent Current $50\mu A$
- Better than Bipolar No Ground Currents!
- Over-Temperature Shutdown
- Small Package SOT-223

The TC1108 is a CMOS LDO with very low dropout voltage. CMOS construction guarantees no ground current, as in bipolar regulators, resulting in significantly lower supply current over the entire load range.

An output capacitor of only $1\mu F$ is required for stability. The TC1108 is available in several fixed voltages and is available in an SOT-223 power tab package.

TC1173 300mA CMOS LDO with Shutdown, ERROR Output, and Bypass

The TC1173 is a precision output (typically $\pm 0.5\%$) CMOS low dropout regulator. Designed specifically for battery-operated systems, the TC1173's CMOS construction eliminates wasted ground current, significantly extending battery life. Total supply current is typically $50\mu\text{A}$ at full load (*20 to 60 times lower than in bipolar regulators!*).

TC1173 key features include ultra low noise operation (plus optional Bypass input); very low dropout voltage (typically 240mV at full load) and internal feed-forward compensation for fast response to step changes in load. An error output (ERROR) is asserted when the TC1173 is out-of-regulation (due to a low input voltage or excessive output current). ERROR can be set as a low battery warning or as a processor RESET

FEATURES

- Zero Ground Current for Longer Battery Life!
- Very Low Dropout Voltage
- Guaranteed 300mA Output
- Standard or Custom Output Voltages
- ERROR Output Can be Used as a Low Battery Detector or Processor Reset Generator
- Power-Saving Shutdown Mode
- Bypass Input for Ultra-Quiet Operation
- Over-Current and Over-Temperature Protection
- Space-Saving MSOP Package Option

signal (with the addition of an external RC network). Supply current is reduced to $0.5\mu\text{A}$ (max) and V_{OUT} and ERROR falls to zero when the shutdown input is low.

The TC1173 incorporates both over-temperature and over-current protection. The TC1173 is stable with an output capacitor of only $1\mu\text{F}$ and has a maximum output current of 300mA.

TC1174

300mA Adjustable CMOS LDO with Shutdown and V_{REF} Bypass

FEATURES

- Zero Ground Current for Longer Battery Life!
- Very Low Dropout Voltage
- Guaranteed 300mA Output
- Adjustable Output Voltage
- Power-Saving Shutdown Mode
- Bypass Input for Ultra-Quiet Operation
- Over-Current and Over-Temperature Protection
- Space-Saving MSOP Package Option

The TC1174 is an adjustable output CMOS low dropout regulator. Designed specifically for battery-operated systems, the TC1174's CMOS construction eliminates wasted ground current, significantly extending battery life. Total supply current is typically 50 μ A at full load (*20 to 60 times lower than in bipolar regulators!*).

TC1174 key features include ultra low noise operation (plus optional Bypass input); very low dropout voltage (typically 240mV at full load) and internal feed-forward compensation for fast response to step changes

in load. Supply current is reduced to 0.5 μ A (max) and V_{OUT} falls to zero when the shutdown input is low. The TC1174 incorporates both over-temperature and over-current protection. The TC1174 is stable with an output capacitor of only 1 μ F and has a maximum output current of 300mA.

Power Management

System Management

TC32M 3-Pin Processor Supervisor with Watchdog Timer

The TC32M is the industry's first processor supervisor to incorporate a power supply monitor, reset generator (with external override) and watchdog timer in a 3-pin package. Available in a TO-92 package and SOT-223 package, the TC32M offers the same functionality as the industry standard, TC1232, but in a smaller, lower cost configuration.

The TC32M maintains the processor in the reset state when supply

FEATURES

- Incorporates the Functionality of the Industry Standard TC1232 (Processor Monitor, Watchdog and Manual Override RESET Controller) into a Small, Lower Cost Package
- Guards Against Unstable Processor Operation Resulting from Power "Brown-Out"
- Automatically Halts and Restarts an Out-of-Control Microprocessor
- Output can be Wire-ORed, or Hooked to Manual RESET Push-button Switch
- Space-Saving 3-Pin TO-92 or SOT-223 Package

voltage is out-of-tolerance. Once the supply is within tolerance, the TC32M maintains the processor in reset for an additional 250msec to allow time for the system to stabilize. During normal system operation, the processor must apply pulses to the TC32M at a prescribed rate. Should the processor fail to do this, a system fault is indicated, and the TC32M issues a momentary processor reset. The output of the TC32M may be wire-ORed with an external auxiliary reset signal or push-button switch for reset override control.

The TC32M is ideal for applications which require a fully-integrated processor supervisor such as battery-powered computers and controllers, automotive instruments, embedded controllers, and critical microprocessor power monitoring.

TC70/71

Micromaster™ – System Supervisor with Power Supply Monitor, Watchdog, and Battery Backup

The TC70/71 are fully-integrated power supply monitors, watchdogs and battery backup circuits in a space-saving 8-pin package.

When power is initially applied, the TC70/71 hold the processor in its reset state for a minimum of 500msec after V_{CC} is in tolerance to ensure stable system start-up. After start-up, processor sanity is monitored by the on-board watchdog circuit. The processor must provide periodic high-to-low level transitions to the TC70/71 to verify proper execution. Should the processor fail to supply this signal within the specified timeout pe-

FEATURES

- Maximum Functional Integration: Precision Power Supply Monitor, Watchdog Timer, External RESET Override, Threshold Detector and Battery Backup Controller in an 8-Pin Package
- Generates Power-on RESET and Guards Against Unstable Processor Operation Resulting from Power "Brown-Out"
- Automatically Halts and Restarts an Out-of-Control Microprocessor
- Output Can Be Wire-ORed, or Hooked to Manual RESET Push-button Switch
- Watchdog Disable Pin for Easier Prototyping (TC70)
- Voltage Monitor for Power Fail or Low Battery Warning (TC71)
- Available in 8-Pin Plastic DIP or 8-Pin SOIC Packages
- Cost Effective

riod, an out-of-control processor is indicated and the TC70/71 issue a momentary processor reset as a result. The TC70 also features a watchdog disable pin to facilitate system test and debug.

The output of the TC70/71 can be wire-ORed to a push-button switch (or electronic signal) to reset the processor. When connected to a push-button switch, the TC70/71 provides contact debounce.

The integrated battery backup circuit on board the TC70/71 converts CMOS RAM into nonvolatile memory by first write-protecting, then switching the V_{CC} line of the RAM to an external battery.

The TC71 incorporates an additional 1.3V threshold detector for power fail warning, low battery detection, or to monitor other system voltages.

TCM809/810 3-Pin μ P RESET Monitors

The TCM809/810 are cost-effective processor supervisor circuits that monitor the supply voltage in digital systems and provide a processor reset signal when necessary. No external components are required. The TCM809 has an active low reset output, while the TCM810 has an active high reset output.

The TCM809/810 output are driven active within 20msec of detecting supply voltage out-of-tolerance. They are maintained active for a minimum of 140msec after the supply voltage is in-tolerance. The output of the TCM809 is guaranteed valid down to $V_{DD} = 1.0V$. Both the TCM809 and TCM810 are available in a tiny SOT-23B-3 package.

FEATURES

- Precision Monitor for 3.0V, 3.3V and 5V Nominal Supplies
- 140msec Guaranteed Minimum RESET (or $\overline{\text{RESET}}$) Duration
- Output Guaranteed Valid to $V_{DD} = 1.0V$
- Low ($17\mu\text{A}$) Operating Current
- Power Supply Noise Immunity
- Small Package SOT-23B-3
- No External Components

The TCM809/810 reject fast transient glitches on the power supply voltage, preventing unwanted system resets. A variety of preset detection voltages accommodate 3V, 3.3V, and 5V system supply applications.

Low supply current, small size, reliable operation, and low installed cost make the TCM809/810 desirable for all microcontroller/microprocessor applications.

TC1232

Microprocessor Supervisory Circuit

FEATURES

- Precision Voltage Monitor Adjustable: +4.5V or +4.75V
- Reset Pulse Width 250msec Min
- No External Components
- Adjustable Watchdog Timer .. 150msec, 600msec or 1.2sec
- Debounced Manual Reset Input for External Override

The TC1232 is a pin-for-pin compatible second source device to the MAX1232 and DS1232LP.

Advanced design, processing, and testing techniques make TelCom's TC1232 the superior choice over previous industry designs. Key features include precision power on/off RESET control, a user-programmable watchdog timer, external RESET override, an adjustable precision voltage monitor, and space-saving 8-pin SOIC and 8-pin PDIP packaging.

The TC1232 series is ideal for applications which require a fully-integrated processor supervisor, such as computers, microprocessor-based controllers, process instrumentation, automotive instruments, and critical microprocessor power monitoring.

Evaluation Kits

Evaluation/Development Kits

TelCom's pre-wired evaluation kits speed time to market. Each kit consists of a pre-wired, 4 inch x 6 inch circuit board, data sheets, and application notes.

TC500EV

FEATURES

- Evaluation and Prototyping Kit for TC500, TC510, TC514, and TC520A
- Pre-programmed Control Processor for Easy Operation with Any RS232 Terminal, Personal Computer, etc.
- User Interface Allows Programming System Parameters and Displaying/Logging Data Using High-level Commands
- Prototyping Area for User Application Circuitry
- On-board Positive Voltage Regulator and Negative Supply Generator for Single-supply Operation
- Can be Used as a TC5xx Control Emulator for System Debugging
- Windows™ Terminal™ and Microsoft™ Excel™ Support Files Included - No Circuit Design Required!*

TC530EV

FEATURES

- Evaluation and Prototyping Kit for TC530/534
- Pre-programmed Control Processor for Easy Operation with Any RS232 Terminal, Personal Computer, etc.
- User Interface Allows Programming System Parameters and Displaying/Logging Data Using High-level Commands
- Prototyping Area for User Application Circuitry
- On-board Positive Voltage Regulator and Negative Supply Generator for Single-Supply Operation
- Can be Used as a TC53x Control Emulator for System Debugging
- Windows™ Terminal™ and Microsoft™ Excel™ Support Files Included - No Circuit Design Required!*

*All Trademarks and Trade Names are the property of their respective owners.

Evaluation/Development Kits

TC642EV

FEATURES

- Complete Evaluation / Prototyping Vehicle for TelCom's TC642 and TC646 BDC Fan Controllers
- Works with Any BDC Fan
- User Prototyping Area
- Configurable Output Driver Circuit
- External or Internal Control Voltage
- Convenient User Test Points

TC1015EV

FEATURES

- No Ground Currents
- Very Low Dropout Voltage
- ±2% Output Regulation
- 50 mA and 100mA Output Currents
- Adjustable and Fixed Output Voltages
- Shutdown Mode
- Error Output (TC1054/5 and TC1072/3)
- SOT-23A-5 and SOT-23A-6 Packaging
- Over-Temperature Shutdown
- Evaluation and Prototyping Kit for TC1014/5, TC1054/5, and TC1070/1/2/3
- Designed to Simplify Evaluation of Ground Current, Dropout Voltage, Load/Line Transient Response, and Ripple Rejection Performance
- User Prototyping Area for Application Circuitry

Evaluation/Development Kits

TCM850EV

FEATURES

- Separate Evaluation Sites for TCM850, TCM851, TCM852, TCM853
- Optimized Layout Maintains Less than 2mV p-p Output Ripple
- User Prototyping Area
- Scope Probe Receptacles at Each Test Site for Accurate Ripple Measurement
- On-board Control Voltage Pot for TCM853
- Convenient User Test Points

TC7660EV

FEATURES

- Evaluates TC7660/S, TC7660H, TC7662, TCM680, TC682, TCM850, TC962, TC1102, TC1121, TC1122, Charge Pump Converters
- Pre-configured Application Circuits: Inverter, Doubler, Doubler Plus Inverter
- User Prototyping Area
- BNC Connector for External Oscillator Input
- Application Design Notes Included

Selection Guides

TelCom Product Portfolio

Thermal Management

THERMAL SUPERVISORS

TelCom's family of temperature sensors and brushless DC fan controllers serve a broad spectrum of applications. Logic output temperature sensors are autonomous, programmable temperature devices that output a logic state change when measured temperature is too high or too low. Voltage output sensors supply a linearized output voltage directly proportional to measured temperature. These devices are useful in thermometer circuits, temperature compensation applications, and as general purpose replacements to older thermistor technology. Serial I/O sensors are designed for easy interface to the system processor. Both multidrop and single zone sensors are available. TelCom's brushless DC Fan Managers provide temperature-proportional fan speed control and fan fault detection. These devices extend fan service life, lower average fan supply current, reduce noise, and protect the system from fan and over-temperature related failures.

Part #	Device Type				Typical Accuracy (°C)	Maximum Accuracy @25°C (°C)	Maximum Temperature Range (°C)	Supply Voltage Range (V)	Max Supply Current (µA)	EVAL Kit	Package Options	Comments
	Logic Output Sensor	Voltage Output Sensor	Serial I/O Sensor	Fan Manager								
TC02		X			±0.5	±2	-40 → +125	+3 → +12	60		SOT-23B-3, TO-92	Replaces NSC LM50
TC03		X			±0.5	±2	-20 → +100	+2.2 → +12	60		SOT-23B-3, TO-92	Replaces NSC LM35, LM45
TC07	X				±1	±3	-40 → +125	+2.7 → +5.5	300		MSOP-8, SO-8	Single output, programmable hysteresis
TC620	X				±1	±3	-40 → +125	+4.5 → +18	400		DIP-8, SO-8	Dual outputs plus prog. hysteresis output
TC621	X				Note 1	Note 1	Note 2	+4.5 → +18	400		DIP-8, SO-8	Uses external temperature sensor
TC622	X				±1	±5	-40 → +125	+4.5 → +18	600		DIP-8, SO-8, TO-220-5	Single output. TO-220 for heat sink mounting
TC623	X				±1	±3	-40 → +125	+2.7 → +4.5	250		DIP-8, SO-8	Dual outputs plus prog. hysteresis output
TC624	X				±1	±5	-40 → +125	+2.7 → +4.5	300		DIP-8, SO-8	Single output
TC626	X				±1	±3	-55 → +125	+4.5 → +18	600		TO-92, TO-220-3	Pre-programmed, 3 pin packages
TC642			X	Note 1	Note 1	Note 1	Note 2	+3.0 → +5.5	1000	TC642EV	DIP-8, SO-8	BDC fan manager
TC643			X	Note 1	Note 1	Note 1	Note 2	+2.7 → +5.5	TBD		DIP-8, MSOP-8, SO-8	BDC fan driver circuit
TC646			X	Note 1	Note 1	Note 1	Note 2	+3.0 → +5.5	1000	TC642EV	DIP-8, SO-8	BDC fan manager with auto-shutdown

TC1023		X			±0.5	±2	-20 → +100	+2.2 → +12	60		MSOP-8, SO-8	TC03 with 1µA shutdown mode
TC1024		X			±0.5	±2	-40 → +125	+3 → +12	60		MSOP-8, SO-8	TC02 with 1µA shutdown mode
TC1132		X			±0.5	±3	-40 → +125	+3 → +12	80		SOT-23B-3, TO-92	Consumer grade TC02
TC1133		X			±0.5	±3	-20 → +100	+2.2 → +12	80		SOT-23B-3, TO-92	Consumer grade TC03
TCN75			X		±1	±2	-55 → +125	+2.7 → +5.5	1000*		DIP-8, MSOP-8, SO-8	Two wire multidrop sensor with interrupt

NOTES: 1. These devices use an external temperature sensor. Accuracy of the total solution is a function of the accuracy of the external sensor.

2. Determined by temperature range of external thermistor.

* TCN75 idle current is 250µA. This device also has a software shutdown mode that reduces supply current to <1µA.

Mixed-Signal

PRECISION ANALOG FRONT ENDS

TelCom's Precision Analog Front Ends contain all the analog circuitry necessary to implement a dual slope integrating A/D converter. They connect to the host processor (or TC520A Serial Adapter) with only 3 wires, and they feature programmable resolution and conversion speed and a low installed cost versus other integrating converters. All TelCom Analog Front Ends directly handle both differential and bipolar input voltages.

Part #	Description	Resolution	Conv/ Sec	Input Channels	Data Interface	Supply Voltage (V)	Input Range (V)	EVAL Kit	Features
TC500	Front End	16 Bits	4 → 10	1	3 Wire Logic	$\pm 4.5 \rightarrow \pm 7.5$	$V_{SS} + 1.5V \rightarrow V_{DD} - 1.5V$	TC500EV	<ul style="list-style-type: none">1. Differential/bipolar voltage input2. High noise rejection3. Programmable resolution/conversion time4. 2 wire logic interface
TC500A	Front End	17 Bits	4 → 10	1	3 Wire Logic	$\pm 4.5 \rightarrow \pm 7.5$	$V_{SS} + 1.5V \rightarrow V_{DD} - 1.5V$	TC500EV	<ul style="list-style-type: none">1. Differential/bipolar voltage input2. High noise rejection3. Programmable resolution/conversion time4. 2 wire logic interface
TC510	Front End	17 Bits	4 → 10	1	3 Wire Logic	$\pm 4.5 \rightarrow \pm 5.5$	$V_{SS} + 1.5V \rightarrow V_{DD} - 1.5V$	TC500EV	<ul style="list-style-type: none">1. Differential/bipolar voltage input2. SERIAL DATA ACQUISITION SUBSYSTEMS

These precision serial A/D converters have 17 bit resolution, superior noise rejection, and user-programmable resolution/conversion speed. Like the Precision Analog Front Ends, they directly handle both differential and bipolar input voltages.

Part #	Description	Resolution	Conv/ Sec	Input Channels	Data Interface	Supply Voltage (V)	Input Range (V)	EVAL Kit	Features
TC530	Serial A/D	17 Bits	3 → 10	1	Serial Port	$\pm 4.5 \rightarrow \pm 5.5$	$V_{SS} + 1.5V \rightarrow V_{DD} - 1.5V$	TC530EV	<ul style="list-style-type: none"> 1. Differential/bipolar voltage input 2. Single-supply operation 3. High noise rejection 4. Programmable resolution/conversion time 5. Serial interface 6. Charge pump ($-V$) output pin
TC534	Serial A/D	17 Bits	3 → 10	4	Serial Port	$\pm 4.5 \rightarrow \pm 5.5$	$V_{SS} + 1.5V \rightarrow V_{DD} - 1.5V$	TC530EV	<ul style="list-style-type: none"> 1. 4 Differential/bipolar voltage input channels 2. BINARY AND BCD A/D CONVERTERS

These single channel, integrating A/D converters are ideal for a wide variety of instrumentation applications.

Part #	Description	Resolution (Digits)	Resolution (Counts)	Max Power (mW)	Data Interface	Supply Voltage (V)	Input Range (V)	Features
TC835	BCD A/D	4-1/2	$\pm 20,000$	30	MUXed BCD	± 5	± 1.99	Higher speed upgrade to TC7135
TC850	Binary A/D	15-Bit	$\pm 32,768$	20	8 bit parallel	± 5	± 3.5	Highest conversion speed (40 conv/sec)
TC7109	Binary A/D	12-Bit	$\pm 4,096$	8	8/16 bit μ P/UART	± 5	± 3.5	3 state binary outputs
TC7109A	Binary A/D	12-Bit	$\pm 4,096$	8	8/16 bit μ P/UART	± 5	± 3.5	Faster recovery upgrade to TC7109
TC7135	BCD A/D	4-1/2	$\pm 20,000$	30	MUXed BCD	± 5	± 3.5	For DMM, DPM, dataloggers
TC8129	BCD A/D	4-3/4	$\pm 400,000$	18	Serial μ P	$+9$	$\pm 400mV$	Highest resolution, serial port
TC14433	BCD A/D	3-1/2	$\pm 2,000$	25	MUXed BCD	$\pm 4.5 \rightarrow \pm 8$	± 1.99	For DMM, DPM, dataloggers
TC14433A	BCD A/D	3-1/2	$\pm 2,000$	25	MUXed BCD	$\pm 4.5 \rightarrow \pm 8$	± 1.99	For DMM, DPM, dataloggers

Mixed-Signal

DISPLAY A/D CONVERTERS

These single channel, dual slope A/Ds interface directly to a display with no need for an external processor. All have an on-board voltage reference.

Part #	Resolution (Digits)	Resolution (Counts)	Display Type	Supply Voltage (V)	Power (mW)	Features
TC811	3-1/2	±2,000	LCD	9	0.6	Display HOLD function, fast overrange recovery, very low power
TC818A	3-1/2	±2,000	LCD	9	10	Bar graph, memory, hold continuity and piezo drive
TC820	3-3/4	±40,000	LCD	9	10	DMM plus frequency counter and logic probe
TC826	2.5% Bar	—	LCD	9	20	Hold, non-muxed LCD drive, 40 data segments plus zero
TC7106	3-1/2	±2,000	LCD	9	10	For DMM, DPM, datalogger applications
TC7106A	3-1/2	±2,000	LCD	9	10	For DMM, DPM, datalogger applications
TC7107	3-1/2	±2,000	LED	±5	10	For DMM, DPM, datalogger applications
TC7107A	3-1/2	±2,000	LED	±5	10	For DMM, DPM, datalogger applications
TC7116	3-1/2	±2,000	LCD	9	10	Hold function
TC7116A	3-1/2	±2,000	LCD	9	10	Hold function
TC7117	3-1/2	±2,000	LED	±5	10	Hold function
TC7117A	3-1/2	±2,000	LED	±5	10	Hold function
TC7126	3-1/2	±2,000	LCD	9	0.5	Low power TC7106
TC7126A	3-1/2	±2,000	LCD	9	0.5	Low power TC7106
TC7129	4-1/2	±20,000	LCD	9	4.5	Lowest noise ±3µV sensitivity
TC7136	3-1/2	±2,000	LCD	9	0.5	Low power/low noise TC7106
TC7136A	3-1/2	±2,000	LCD	9	0.5	Low power/low noise TC7106

FREQUENCY-TO-VOLTAGE/VOLTAGE-TO-FREQUENCY CONVERTERS

These versatile converters can be used for either F/V or V/F conversion.

Part #	Frequency Range (kHz)	Full Scale (ppm FS/°C)	Nonlinearity (%FS)
TC9400	100	±40	±0.05
TC9401	100	±40	±0.02
TC9402	100	±100	±0.25

LINEAR BUILDING BLOCKS

TelCom's family of Linear Building Blocks combine several low-power analog functions into low-profile packages for smaller, more efficient analog circuit solutions. All op amp and comparator inputs and outputs are rail-to-rail. Typical op amp/comparator input bias currents are under 100pA. Supply voltage range of all devices is 1.8V to 5.5V, and operation with single or dual supplies is supported.

NOTES: *Availability Late 1998. Contact TelCom Semiconductor for details.

Power Management

DC-TO-DC CONVERTERS

Charge Pump Converters

TelCom's charge pump converters do not require inductors, saving associated cost, size, and EMI. Using as few as two inexpensive external capacitors, these devices feature wide input voltage ranges and high operating efficiencies. All devices are available in both commercial (0°C to 70°C) and industrial (-40°C to $+85^{\circ}\text{C}$) temperature ranges.

PWM CONTROLLERS

TelCom's BiCMOS and CMOS PWMs are lower power replacements for industry standard converters. These devices feature wider operating frequency range, lower supply current, and better operation over-temperature than their bipolar counterparts.

Part #	Current/Voltage Mode	Input Voltage Range (V)	Quiescent Current (mA)	Max Freq. (kHz)
TC170	Current	8 → 16	3.8	200
TC18/28/38C43	Current	8 → 15	2.0	500
TC18/28/38C46	Current	8 → 18	2.5	500
TC25/35C25	Voltage	8 → 18	3.0	1000

Power Management

LINEAR REGULATORS

Low Output Current (<500mA) Linear Regulators

TelCom's CMOS LDO family supercedes a wide variety of popular bipolar regulators, delivering superior performance at lower supply current levels. They have the highest ripple rejection (54db typical) of any comparable CMOS LDO available. Additional functions (such as an out-of-regulation [ERROR] output and shutdown control input) simplify system power management.

Power Management

High Output Current (>500mA) Linear Regulators

TelCom's high current bipolar regulators are designed specifically for Pentium™ and Pentium Pro™ CPU supplies and system GTL bus terminators. All devices feature fast transient response, low dropout voltage, and are available in both fixed and adjustable voltage options. All devices have built-in short circuit and over-temperature protection.

Part #	Output Voltages (V)	Max Output Current (A)	Max Input Voltage (V)	Active Supply Current (Max mA)	V _{DROPOUT} @ Max I _{OUT} (V)	Line Reg. (Max %)	Load Reg. (Max %)	Output Voltage Accuracy (%)	EVAL Kit	Package Option
TCL1117	2.85, 3.3, 5.0, Adj.	0.800	15*	10	1.2	0.2	0.4	±1	TCL1585EV***	DDPAK-3, SOT-223-3
TCL1585	3.3, Adj.	4.6	7	13	1.4	0.2	0.3	±2	TCL1585EV***	DDPAK-3, TO-220-3
TCL1587	1.5, 3.3, Adj.	3	7	13	1.3	0.2	0.3	±2**	TCL1585EV***	DDPAK-3, TO-220-3

NOTES: * Maximum input voltage for TCL1117-2.85V is 10V.

** Output accuracy values shown are for 3.3V versions. Output accuracy for 1.5V versions is ±10%. Output accuracy spec does not apply to adjustable versions.

Power Management

POWER MOSFET DRIVERS

Driving MOSFETs has never been easier, nor more efficient! TelCom's Power MOSFET Drivers provide high slew rate, rail-to-rail output signal drive from TTL level-compatible input signals. Unlike discrete driver circuits, TelCom's integrated drivers deliver consistent results in less board space ... and a lower installed cost! Unlike many competitive devices, TelCom's drivers are virtually latch-up proof: they can absorb as much as 0.5A of reverse current into their output without damage or upset. These drivers are available in a wide range of peak output currents and topologies.

Part #	Configuration	Peak Output Current (A)	Output Resistance R_H/R_L (Max Ω @ 25°C)	Max Supply Voltage (V)	Input/Output Delay (t_{D1}, t_{D2}) [*] (nsec)	Package Options

General Information

Ordering Information

1. Order Entry

Orders for products contained herein should be directed to the appropriate TelCom representative or distributor. Please contact TelCom Semiconductor, 1300 Terra Bella Avenue, Mountain View, California 94043, Phone: 1-800-888-9966 for a referral.

2. Ordering Information

Each item must be ordered using the complete part number exactly as listed on the data sheet.

3. Part Number Explanation:

For all TelCom Semiconductor Voltage Detectors and Regulators:

ORDERING INFORMATION

PART CODE

TelCom Semiconductor Device _____

TC XX XX XX XX X X X XXX

Product Part Number _____

Variation / Option _____

Output Voltage, or Detect Voltage (if applicable) _____

Extra feature Code and/or Tolerance _____

Operating Temperature Range: _____

E: Extended Range (- 40°C to +85°C)

Package Type (see listing on page 114 and specific data sheet) _____

Number of package pins (see listing page 114 and specific data sheet) _____

Taping Direction: _____

713: Standard Taping, 723: Reversed Taping, No Suffix: TO-92 Bulk

Ordering Information

For all Other TelCom Semiconductor Devices:

ORDERING INFORMATION

PART CODE

XXX

TelCom Semiconductor Device

TC

XXXXXX

X

X

X

X

Product Part Number (2 to 6 characters, see specific data sheet)

Electrical Performance

Grade Option (if applicable)

A: Test selection criteria, see specific data sheet
B: Test selection criteria, see specific data sheet

R: Reverse pin layout

Operating Temperature Range:

C: Commercial Range (0°C to +70°C)

E: Extended Range (- 40°C to +85°C)

I: Industrial Range (- 25°C to +85°C)

M: Military Range (- 55°C to +125°C)

V: See data sheet for specific temperature range.

Package Type (see listing on page 114 and specific data sheet)

Number of Package Pins (see listing on page 114 and specific data sheet)

Taping Direction:

713: Standard Taping, 723: Reversed Taping, No Suffix: TO-92 Bulk

Packaging Information

PACKAGE TYPE			NUMBER OF LEADS	
Abbr.	Package	Description	Abbr.	Leads
A	TO-220-3 TO-220-5 TO-220-7	TO-220	A	8 (Narrow)
B	PFP	Plastic Flat Pack	B	3
C	SOT-23A-3 SOT-23A-5 SOT-23A-6	SOT-23A (EIAJ SC-59) SOT-23A (EIAJ SC-74A) SOT-23A (EIAJ SC-74)	C	4
D	SOT-223-3	SOT-223	D	14 (Narrow)
E	DDPAK-3 DDPAK-5 DDPAK-7	DDPAK DDPAK DDPAK	E	16 (Wide) SOIC
F			F	16 (Narrow) DIP
G			F	24 (Narrow)
